Professional Summary

Bachelor of Computers and Information, specializing in Artificial Intelligence, and currently pursuing postgraduate studies in Computer Science, with practical experience across technology, data analytics, automation, and business operations. Experienced in developing technology solutions, analyzing operational and financial data, automating workflows, and applying data-driven approaches to real-world business challenges.

Core Technical & Analytical Skills

- **Programming & AI:** Python, JavaScript, Machine Learning, Artificial Intelligence, Automation.
- **Data & Analytics:** SQL, Pandas, NumPy, Power BI, Microsoft Excel, ETL Pipelines, Data Cleaning, Data Modeling, Data Visualization, KPI Dashboards, Business Analytics.
- **Software & Automation:** Google Apps Script, Google Sheets, Google BigQuery, Google Calendar, Git/GitHub, Jupyter Notebook, Workflow Automation.
- **Business & Operations:** Business Analysis, Business Management, Operations Management, Business Development, Process Improvement, Financial Analysis, Pricing Analysis, Supply Chain Fundamentals, CRM.

Projects

Business Management & Operations Platform

Sep 2026

- Designed and developed a web-based business management platform integrating CRM, attendance, POS, invoicing, inventory, financial records, shift reconciliation, feedback, and KPI dashboards.
- Built a modular Google Apps Script backend for clients, sessions, services, invoices, expenses, cash shifts, and feedback.
- Automated check-in/out, session charging, package balance tracking, invoice generation, inventory updates, and financial aggregation.

Workspace Data Analytics & Business Intelligence

Jul 2026

- Consolidated 900+ daily Excel files collected over two years using Python into a unified dataset for business analysis.
- Cleaned and standardized inconsistent manual data, resolving duplicates, missing timestamps, multilingual customer-name variations, invalid phone numbers, and data-entry errors.
- Prepared the dataset for Power BI and developed dashboards for workspace utilization, customer activity, and operational performance.

DataCo Smart Supply Chain for Big Data Analysis

May 2026

- Served as Lead Sales & Profitability Analyst in a 5-member team, contributing to the “Best Graduation Project” award in the NTI Data Analysis track.
- Engineered a Star Schema for 180K+ records and 53 variables, analyzing \$36.78M in total sales.
- Used advanced SQL with CTEs, window functions, and multi-table joins to identify a 50% profit gap and \$3.73M in potential lost revenue; proposed a 5% discount cap contributing to \$2.2M in net profit savings.

Chinook Strategic Business Intelligence Project

Apr 2026

- Analyzed customer, sales, and product data across 59 global customers to identify revenue concentration and growth opportunities.
- Identified 37% revenue dependency on Rock and developed a commission-based sales strategy based on analyzed sales patterns.
- Used geospatial analysis and Power BI to identify high-performing international markets and build an executive sales dashboard.

AI-Driven Solar Panel Tracking Model

Aug 2025

- Built a Python machine learning model for solar panel tracking, achieving 84% dual-axis positioning alignment accuracy in simulated environments.
- Used dynamic irradiance and simulated sensor inputs to model adaptive solar-panel positioning.

Professional Experience

Founder & General Manager

Mar 2023 – Sep 2026

Techno Club Workspace, Mansoura, Egypt

- Founded and managed a technology-driven coworking and business workspace, overseeing operations, business development, customer relationships, pricing, bookings, and a cross-functional team of 6 employees.
- Analyzed operational and financial data to identify profitability differences, seasonality risks, capacity constraints, and key cost drivers, supporting data-driven decisions.
- Executed a strategic pivot toward a B2B model targeting startups, work teams, and corporate instructors through upfront monthly contracts and improved space utilization.
- Contributed to a 40% increase in revenue and 20% reduction in operational expenses through business model optimization, operational improvements, and technology-driven process changes.
- Developed automated booking, operational tracking, and KPI reporting workflows using Google Apps Script, Google Calendar, Google BigQuery, and Google Sheets, reducing booking conflicts by approximately 60%.

Data Analyst Intern

Mar 2026 – May 2026

National Telecommunication Institute (NTI), Mansoura, Egypt

- Engineered ETL pipelines on telecom operational datasets using SQL and Python, applying data governance practices and developing structured Star Schema models.
- Developed business metrics and interactive KPI dashboards to support operational analysis, reporting, and data-driven decision-making.
- Delivered 3 interactive Power BI dashboards tracking operational KPIs and presented data-driven findings to program stakeholders and technical mentors.

Programming & Technology Instructor

Mar 2023 – Dec 2025

Mansoura, Egypt

- Delivered practical training in Python, Scratch, Front-End Development, Automation, and ICDL, covering programming fundamentals, digital skills, and hands-on projects.
- Guided learners through practical exercises and projects, helping them apply programming and technology concepts to real-world tasks.

Certifications

- **Google Advanced Data Analytics**
- **Data Analytics Essentials** – Cisco Networking Academy

Education

MSc Computer Science Candidate, Mansoura University

Expected May 2027

- Postgraduate Preparatory Coursework in Computer Science completed in 2025.

Bachelor of Computers and Information – Artificial Intelligence Department, Mansoura University

2020 – 2024

Languages

- **Arabic:** Native
- **English:** Professional Working Proficiency
